

## Trust the Engineered Strength of the Atabec Safety Lock on Your Pumping Units

Engineered for any size pumpjack, the Atabec Safety Lock is a permanently mounted sheave lock designed to engage with the crank arm. Operated from outside the swing area by a simple hydraulic handpump, the Atabec removes the risk of struck-by incidents caused by counterweights.

The patented design isolates and prevents movement of the crank arms, allowing the pumpjack counterweights to be locked in a variety of positions to quickly facilitate inspection, service, and counterweight or stroke length adjustment. With the hydraulic fork engaged, there is zero crank movement even with **no brake** and **full power** applied to the unit. The Atabec Safety Lock achieves safe effective LOTO in a fraction of the time.\*

The simple yet robust design employs a common locking assembly with custom mounting hardware to accommodate pumpjacks of all sizes and manufacturers. A custom fit makes installation fast and simple.

Boasting a 3:1 design safety factor, the Atabec Safety Lock reduces the risk of injury leading to lower incident rates, reduced liability exposure and decreased insurance costs.

**The Atabec Safety Lock is a sound investment in well site safety.**

\*compared to traditional methods

## The Atabec Safety Lock is an affordable and novel approach with several elements that differentiate it from traditional practices

### Safe

- Safer Operation & Maintenance
- Less Incidents and Injuries
- Reduce Liability Exposure
- Lower Insurance Costs

### Efficient

- Minimize Third Party Expenses
- Reduce Maintenance and Downtime
- Less Equipment Wear and Damage

### Universal

- Compatible with Any Pumpjack
- No On-Site Cutting, Grinding, Welding or Drilling

### Environmentally Responsible

- Reduce on-site traffic and heavy equipment
- Closed loop system
- 100% Non-Toxic, Environmentally Friendly Fluid

**Is the Atabec Safety Lock the right fit for your field operations?**  
Contact us for a complimentary economic cost/benefit consultation to determine whether a field pilot can improve the safety and operations of your assets.
